Re: Wet Technologies Wet Blast Testimonial

After purchasing our Wet Technologies automatic wet blasting machine we saw our burr hand production increase by 300%. The machine has been a very reliable machine and when we have had issues Wet Technologies has gone the extra mile to see that our issues are handled in a timely manner. Mitch Sherman has gone out of his way to stop by our facility to diagnose issues and to make sure that our machine is running up to our standards.

We started with a Wet Technologies manual blast machine which made the transition to the automatic blast machine very simple. The media density monitor makes it simple to check how much media is in the machine. This translates into a consistent blasting finish from load to load. We had burr issues with our end customer before the installation of our machine and they have since gone away.

We are very satisfied with our blasting machine and if our levels of production increase we will definitely be looking into an additional automatic blasting machine.
